

**Problema 9:** Calcolare la distanza e la rotta da impostare per andare dall'aeroporto di **St Jean** (Codice ICAO: CYJN – Latitudine  $\varphi_A = 45^{\circ}17'24''$  N – Longitudine  $\lambda_A = 73^{\circ} 16' 48''$  W) all'aeroporto di **St Honore** (Codice ICAO: CYRC – Latitudine  $\varphi_B = 48^{\circ}31'12''$  N – Longitudine  $\lambda_B = 71^{\circ} 03'$  W).

$$[m_{AB} = 214,3 \text{ NM}; TC = 25^{\circ}]$$

Svolgimento

$$\Delta\varphi_{AB} = \varphi_B - \varphi_A = 48^{\circ}31'12'' - 45^{\circ}17'24'' = 3^{\circ}13'48'' N \equiv 193,8 \text{ NM}$$

$$\Delta\lambda_{AB} = \lambda_B - \lambda_A = -71^{\circ}03' + 73^{\circ}16'48'' = 2^{\circ}13'48'' E \equiv 133,8 \text{ NM}$$

$$\varphi_m = \frac{\varphi_A + \varphi_B}{2} = \frac{48^{\circ}31'12'' + 45^{\circ}17'24''}{2} = 46^{\circ},905$$

$$\mu = \Delta\lambda_{AB} \cdot \cos(\varphi_m) = 190 \cdot \cos(43^{\circ},75) = 91,4 \text{ NM}$$

$$m_{AB} = \sqrt{\Delta\varphi_{AB}^2 + \mu^2} = \sqrt{193,8^2 + 91,4^2} = 214,3 \text{ NM}$$

$$Tg(\alpha) = \frac{\sin(\alpha)}{\cos(\alpha)} = \frac{\Delta\varphi_{AB}}{\mu} \rightarrow \alpha = \arctg\left(\frac{193,8}{91,4}\right) = 65^{\circ}$$

$$TC = 90^{\circ} - \alpha = 90^{\circ} - 65^{\circ} = 25^{\circ}$$
